pollution

waves

population

litter

Composite: To use the correct vocabulary to describe different habitats and the negative impact humans have on the environment and the advantages to recycling.

Components:

1. To describe how and why living things live in specific **habitats**.
2. To explain what classifications of animals there are and give examples.
3. To explain what a **food chain** is and what role animals and plants have.
4. To describe what an ocean is, where some **oceans** are located and what creatures live in them.
5. To explain the changes that the environment is going through and the habitat destruction taking place.
6. To describe what "reduce, reuse and recycle" means and why it is important.
